Final Assignment

Time: 1.5 hour

1. An online food ordering website helps a user get food delivered to them via courier from the users expected restaurant. But to use to the system the user must first register through the online registration system of the website where the user must provide information's such as First name Middle name Last name, address, email, contact number, preferred transaction method(Bkash, Visa, Rocket), Type of service(Regular, Express, Platinum) etc. Once these information's are provided, then the user will be able to submit the information and then get registered. The registered user's information will need to be stored in the database. All the information needs to be validated (form validation) before entering into the database. Now, write the required scripts using PHP and HTML for front and backend and MYSQL for database to implement the system. Make sure to name the frontend file as **yourname_yourId.php (ex: rayhan_04118.php)** and name the database as **yourdept_yourName(ex: CSE_rohan).** It is mandatory to use this format.

N.B: After completing the task submit the database and the files to the same mail thread you used for sending the assignment request to me. The task needs to be submitted within 1.5 hour after getting the assignment. For any query contact me during that time though my phone. A delayed submission will hinder your chance of getting expected marks even after completing the task properly.
